2.5 Assessment
Assessment: update and maintain the strategy as a live document

As well as bringing people together, the strategy is a tool for collating and analysing information from various activities. By undertaking these assessment activities, strategic and programme plans will be better informed and more suited to the response. It is also important to collaborate with other organisations in undertaking assessments and to share data to ensure an equitable, comprehensive and integrated response.

Shelter After Disaster refers to a text from the tsunami response (43).

guide  
43

**The role of needs assessment in the tsunami response**  
Claude de Ville de Goyet & Lezlie C Morinière / Tsunami Evaluation Coalition (2006)

**Key terms:**  
role of assessment; planning process; scale of intervention; nature of intervention; case study

This report evaluates the adequacy, appropriateness and effectiveness of the assessment of need in the first three months after tsunami. It focuses on the impact of assessment on the response of international agencies and institutional donors and, ultimately, on the affected population.

The main body of this report reviews assessments intended to influence the decision making of the international community at large.
